

Scenario: You are a young adult in college, and want to go camping for the week. You're in a state in which you haven't been in before, except for the tour of the college. You have some supplies for camping, but aren't sure where to get some of the stuff. You want an app to help find useful stores and information on campsites.

Task 1: Look up a campsite and look at the trail map

Task 2: Get a campsite, select three items, and then see if any stores have all three items

Task 3: Find a campsite, and then find information on the status of the park regarding corona (Would be on the site's website, which is found in the app)

Notes:

3 Improvements:

- Implement more pages for finding campsites
- Help navigate reservations
- Ability to favorite campgrounds, so you can look into the information without having to search them everytime

3 Good features:

- Select screen for the various items needed for camping
- Information page for the parks
- Multiple ways to search for the park
